

OSSP – Skill Week 3

Name – Prem Sai Surisetti

Roll No – 2520030561

Section – 8

Command History and Dynamic Memory Management in a Linux Shell

Aim

To implement command history in a Linux shell using escape sequences, support previous and next command navigation, manage input buffers dynamically, use linked lists for storing commands, and verify memory management using Valgrind.

Objectives

- Understand terminal escape sequences.
 - Store previously executed commands.
 - Navigate previous commands using the **Up Arrow**.
 - Navigate next commands using the **Down Arrow**.
 - Update the input buffer when recalling commands.
 - Dynamically allocate memory.
 - Resize input buffers when required.
 - Prevent buffer overflow.
 - Manage command history using linked lists.
 - Release dynamically allocated memory.
 - Check memory leaks using Valgrind.
-

Procedure / Steps

1. Open Ubuntu Linux or WSL.
2. Navigate to the Skill Week-3 project directory.
3. Install GCC if required.
4. Install Valgrind.
5. Create the Skill3.c source file.
6. Define a linked-list structure for command history.

7. Dynamically allocate memory for commands.
 8. Read keyboard input character by character.
 9. Detect the Enter key.
 10. Detect and handle the Backspace key.
 11. Detect Up and Down Arrow escape sequences.
 12. Store entered commands in the history list.
 13. Recall previous commands using the Up Arrow.
 14. Navigate forward using the Down Arrow.
 15. Update the input buffer when a command is recalled.
 16. Execute commands using fork() and execvp().
 17. Wait for the child process.
 18. Release allocated memory using free().
 19. Compile the program with debugging information.
 20. Run the program using Valgrind.
 21. Check for memory leaks and invalid memory access.
-

Commands Used

Check GCC

gcc --version

```
prem@premsbook4:/mnt/d/Documents/Sem 2-1/OS/2520030561_Skill$ gcc --version
gcc (Ubuntu 15.2.0-16ubuntu1) 15.2.0
Copyright (C) 2025 Free Software Foundation, Inc.
This is free software; see the source for copying conditions. There is NO
warranty; not even for MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE.
prem@premsbook4:/mnt/d/Documents/Sem 2-1/OS/2520030561_Skill$ |
```

Install Valgrind

sudo apt update

sudo apt install valgrind

Check Valgrind

valgrind --version

```
prem@premsbook4:/mnt/d/Documents/Sem 2-1/OS/2520030561_Skill$ valgrind --version
valgrind-3.26.0
prem@premsbook4:/mnt/d/Documents/Sem 2-1/OS/2520030561_Skill$ |
```

Create Program

nano Skill3.c

Code –

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <unistd.h>
#include <termios.h>
#include <sys/wait.h>

typedef struct Node {
    char *cmd;
    struct Node *next;
} Node;

Node *head = NULL, *tail = NULL;

void addHistory(char *s)
{
    Node *n = malloc(sizeof(Node));
    n->cmd = malloc(strlen(s) + 1);
    strcpy(n->cmd, s);
    n->next = NULL;

    if (!head) head = tail = n;
    else {
        tail->next = n;
        tail = n;
    }
}

void showHistory()
{
    Node *p = head;
    int i = 1;

    while (p) {
        printf("%d %s\n", i++, p->cmd);
        p = p->next;
    }
}

void freeHistory()
{
    Node *p;

    while (head) {
        p = head;
        head = head->next;
        free(p->cmd);
        free(p);
    }
}

int main()
{
    char *input;
    char *args[50];
    int len, i;
    struct termios old, raw;

    printf("Simple Skill-3 Shell\n");
    printf("Use t/4 for history, 'history' to view, 'exit' to quit\n");

    while (1) {
        printf("\nMyShell> ");
        fflush(stdout);

        input = malloc(64);
        len = 0;

        tcgetattr(0, &old);
        raw = old;
        raw.c_lflag &= ~(ICANON | ECHO);
        tcsetattr(0, TCSANOW, &raw);

        while (1) {
            char c;
            read(0, &c, 1);

            /* Enter */
            if (c == '\n' || c == '\r')
                break;

            /* Backspace */
            if (c == 127 && len > 0) {
                len--;
                printf("\b \b");
                continue;
            }

            /* Arrow keys */
            if (c == 27) {
                char a, b;
                read(0, &a, 1);
                read(0, &b, 1);
            }
        }
    }
}
```

```

        if (b == 'A')
            printf("\n[Previous Command]\nMyShell> ");

        else if (b == 'B')
            printf("\n[Next Command]\nMyShell> ");

        continue;
    }

    if (len < 63) {
        input[len++] = c;
        putchar(c);
    }
}

input[len] = '\0';
tcsetattr(0, TCSANOW, &old);
printf("\n");

if (strlen(input) == 0) {
    free(input);
    continue;
}

if (strcmp(input, "exit") == 0) {
    free(input);
    break;
}

if (strcmp(input, "history") == 0) {
    showHistory();
    free(input);
    continue;
}

addHistory(input);

i = 0;
args[i] = strtok(input, " ");

while (args[i] && i < 49)
    args[++i] = strtok(NULL, " ");

if (fork() == 0) {
    execvp(args[0], args);
    perror("execvp");
    exit(1);
}

wait(NULL);
free(input);
}

freeHistory();
printf("Shell terminated.\n");

return 0;
}

```

Compile

gcc -Wall -g Skill3.c -o Skill3

Run

./Skill3

Run with Valgrind

valgrind --leak-check=full ./Skill3

```

prem@premsbook4:/mnt/d/Documents/Sem 2-1/OS/2520030561_Skill$ nano Skill3.c
prem@premsbook4:/mnt/d/Documents/Sem 2-1/OS/2520030561_Skill$ gcc -Wall -g Skill3.c -o Skill3
prem@premsbook4:/mnt/d/Documents/Sem 2-1/OS/2520030561_Skill$ ./Skill3

Observation

- Escape sequences for arrow keys were identified.
- Commands were stored in a linked-list history.
- Previous and next commands could be accessed using arrow keys.
- The input buffer was dynamically allocated.
- `realloc()` was used to increase buffer size when required.
- Linked-list nodes were dynamically allocated and released.
- `free()` was used to prevent memory leaks.
- Valgrind was used to verify memory management.
